Nibadon Plating Solution.

Office Address:

**Road No-8, House No-53, DIT Project,
Merul Badda, Dhaka-1212.**

Phone:+880 1846262892.

Email id:dolan969@nibadonplating.com, dolan.barua@yahoo.com.

Website address:www.nibadonplating.com.

Product display

Automatic Elevator Return Type Plating Line

Features:

1. With high efficiency ,high capacity , easy maintenance,etc.
2. Adopt HMI screen control.
3. Main electrical components use "Mitsubishi", "Omron" ,"Schneider", " Siemens" and other famous brand components.
4. Beat control is adjustable (28-60s/beat).
5. This type of plating line is widely used in hardware, plastic, faucets, auto-parts and other industry .

← Plastic plating line

Copper- Nickel- Chrome plating line

Nickel plating line →

← Zinc plating line

Product display

Automatic Hoist Type Plating Line

Features:

1. With Auto/semi-auto conversion ,reasonable design, Compact design, highly automated ,etc.
2. Adopt HMI screen control which can efficiently monitor the data , PH,time ,running and so on .
3. Main electrical components use "Mitsubishi", "Omron" ,"Schneider", "Siemens " and other famous brand components.
4. This type of plating line is widely used in hardware, electronic, plastic, auto parts ,decorative lights, furniture and other industry .

← Plating line for auto parts

← Zinc alloy plating line

Copper plating line →

← Electroless nickel plating

Auto parts plating line →

Auto Barrel Type Plating Line

Features:

1. With Auto/semi-auto conversion ,reasonable design,Compact design, highly automated ,etc.
2. Adopt HMI screen control which can efficiently monitor the data , PH,time ,running and so on .
3. Barrel roll use Module pattern,net pattern , PP borehole and so on according to customer's demand; With great conductivity, drive flexible,no beating ,etc.
4. Main electrical components use "Mitsubishi","Omron","Schneider", "Siemens " and other famous brand components.
5. This type of plating line is widely used in hardware,electronic, decorative lights,furniture ,fastenersand,auto parts other industry .

Automatic Anodizing Line

Features:

1. With Auto/semi-auto conversion ,reasonable design, Compact design, highly automated ,etc.
2. Adopt HMI screen control which can efficiently monitor the data , PH,time ,running and so on .
3. Main electrical components use "Mitsubishi" ,"Omron","Schneider" "Siemens "and other famous brand components.
4. This automatic line is widely used in hardware appliances, lighting equipment, auto parts ,cooking utensils and other aluminum oxide industry .

Aluminium anodizing line for auto parts

Automatic Single Arm Plating Line

1. With Auto/semi-auto conversion ,reasonable design,Compact design, highly automated ,etc.
2. Adopt HMI screen control which can efficiently monitor the data , PH,time ,running and so on .
3. Main electrical components use "Mitsubishi" ,"Omron","Schneider", "Siemens "and other famous brand components
4. This type of plating line is widely used in small and light hardware, electronic,plasticand other product .

Silver plating line →

← Nickel plating line

Automatic Phishing Type plating line

1. With high efficiency ,high capacity ,easy maintenance,etc.
2. Main electrical components use "Mitsubishi" ,"Omron","Schneider" "Siemens "and other famous brand components.
3. This automatic line is widely used in hardware appliances, lighting equipment,faucets,auto-parts and other industry .

Automatic PCB Plating Line

Introduction

In this series, it is mainly including wet process facilities for PCB, such as de-smear, electroless copper, panel plating, pattern plating, Cu/Ni plating, Electroless Ni/Au, black oxide, tab plating and so on.

We can design and manufacture various type of model according to customer's requirements, such as mini type, single arm type, gantry type, open type, enclosure type, lift up type, root-mounting, manual type semi-automatic, automatic and so on.

Along with the rapid development of electronic information technologies, the PCB technologies is required higher and higher, especially the filling and blind hole of the PCB technologies are widely applied, to meet the requirements of market, we have developed conventional vertical plating line for filling and blind hole PCB production.

Air knife

PCB Plating Line

Reel-to-Reel Plating Line

Features:

1. Auto feeding and downloading material device, auto adjusting speed for buffer.
2. The special design allow the work piece to be plated with both two sides one time.
3. Tank plating, wheel spot plating, selectivity plating, brush plating and other styles will be optional (kinds of plating: Gold, Silver, Nickel, Copper, Tin, Pd, etc.)
4. The specialized ceramic bearing is more durable and anti-corrosion
5. Use imported solution pump, water pump and filter pump. With complete functions of output statistics, fault automatic diagnosis, display, Equipment maintenance tips and so on.
6. Installation guide wheel, spray nozzle, masking tape, spot plating wheel mold and so on.
